ARPON[®]

Destroyer[®]

INSECTICIDE FOR CRAWLING INSECTS

Emulsifiable insecticide with deltamethrin and tetramethrin that combines an immediate shock effect with excellent repellent action and residual effectiveness. With a single application and at a dose of between 0.5-1%, it is able to eliminate flying and crawling insects such as flies, mosquitoes, wasps, mites, cockroaches, etc.

— USE IN LIVESTOCK FARMING —

The efficacy you need.

ARPON®

Destroyer®

DESCRIPTION:

ARPON DESTROYER is an insecticide that combines an immediate shock effect with excellent repellent action and residual effectiveness. Its active ingredients, Deltamethrin and Tetramethrin, combine the immediate effect of Tetramethrin and the endurance of Deltamethrin. Thus, in a single product it combines the knock-down effect of pyrethrins, along with a strong killing effect and high endurance. Therefore, after application, its activity lasts longer than other conventional insecticides. Furthermore, its repellent properties protect animals housed in enclosures disinfected with ARPON DESTROYER from fly and mosquito bites. ARPON DESTROYER is a highly effective and fast-acting insecticide, which acts by contact and by ingestion, as both of its active ingredients are lipophilic and are rapidly absorbed in the insect cuticle, high in lipids. Thanks to its knock-down effect, the insect becomes extremely excited and is rapidly paralysed, dying after a short time.

USE:

ARPON DESTROYER is suitable for the disinfection of all types of livestock premises and facilities.

MODE OF USE:

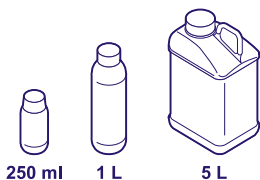

Dilute between 5 and 10 ml of ARPON DESTROYER for every litre of water (0.5%-1%) depending on the type of surface (higher dose for porous surfaces). Apply the resulting solution by spraying or spray-fogging, using 5 litres for every 50 m² (porous surface) or 100 m² (impermeable surface).

REGISTRATION No.: 01009-P

COMPOSITION

Deltamethrin	2.0%
Tetramethrin	1.0%
Solvent and excipients qs.	100%
