DESCRIPTION:

ARPON® Premium is an emulsifiable insecticide for use in the food industry. Its active ingredient, cypermethrin, is a contact acaricide/insecticide belonging to the type II pyrethroid group, which are characterised for containing an alpha-cyano group in their molecule. Type II pyrethroids principally affect the sodium channels in the nerve membrane, resulting in the prolonged transient permeability of the membrane to sodium during nerve stimulation. This action causes the rapid paralysis of the insect. Cypermethrin has a quick and lasting effect.

Based on scientific studies, this insecticide for the food industry is effective against:

- Flies.
- Mosquitoes.
- Fleas.
- Lice.
- Ticks.
- Wasps.
- Cockroaches.
- Red mite and other insects.

The death of the insect is caused by paralysis, following motor incoordination, at any stage of its life cycle.

MODE OF USE:

ARPON® Premium must be diluted in water at 0.5-1% (equivalent to diluting 50-100 ml of ARPON Premium for every 10 l of water). Spray walls, ceilings, floors, windows, etc., using 5 l of the prepared emulsion for every 100 m², in the case of even surfaces, or 10 l of the prepared emulsion for use on porous surfaces.

This insecticide for the food industry should be applied exclusively by specialists.

USE IN THE FOOD INDUSTRY REGISTRATION No.: 13-30-04812-HA

ENVIRONMENTAL USE REGISTRATION No.: 13-30-04812

USE BIOCIDES SAFELY. ALWAYS READ THE LABEL AND PRODUCT INFORMATION BEFORE USE.
