LETAL

TRX[®] Cockroach Gel

INSECTICIDE GEL BAIT

LETAL TRX COCKROACH GEL is an insecticide for cockroaches in the form of a gel bait. It attracts all variants of this insect (black cockroach, German cockroach, brown-banded cockroach, American cockroach). It is a ready-to-use product with a long-lasting effect in cockroach control (adults and larvae). It contains imidacloprid, an insecticide that acts by contact and by ingestion against insects.

— FOR DOMESTIC USE —

The efficacy you need.

LETAL**TRX® Cockroach Gel****DESCRIPTION:**

LETAL® TRX Cockroach gel is an insecticide for cockroaches in the form of a gel bait. It attracts all variants of this insect (black cockroach, German cockroach, brown-banded cockroach, American cockroach). It is a ready-to-use product with a long-lasting effect in cockroach control (adults and larvae). It contains imidacloprid, an insecticide that acts by contact and by ingestion against insects. Cockroaches, strongly attracted by the gel bait, enter into contact, ingest and become coated with the product, transferring it to the nest, where they contaminate the rest of the colony.

MODE OF USE:

LETAL® TRX Cockroach Gel should be applied occasionally to cracks or slits in areas where the insects frequent and/or breed, using a syringe or drop applicator. Apply this professional cockroach insecticide to areas where they tend to breed: warm, damp and dark areas such as corners, cracks in baseboards, behind furniture and kitchen appliances, pipelines, etc. Apply the product directly from the container in which it is supplied. Remove the cap and squeeze the plunger until the gel comes out. Apply the product in a localised fashion in the form of small drops of approximately 0.1 grams (a 0.1 gram drop of gel is equivalent to an approximate diameter of 5 millimetres). The dose will depend on the species of cockroach, the degree of infestation, etc.

The drops of bait will remain active and will attract insects for several months, although it is advisable to perform an inspection 1 week after application, depending on the degree of infestation, in case it is necessary to replace the gel consumed. It is suitable for both indoor use (kitchens, pantries, store rooms, etc.) and outdoor use (patios, terraces, balconies, etc.) in areas where cockroaches breed or frequent.

COMPOSITION

Imidacloprid	2.15%
Substance with a bitter taste	0.001%
Excipients q.s.p.	100%

FORMATS AVAILABLE

Syringe with bait

10 g
