SANITAS[®]

Forte Vet

BROAD-SPECTRUM DISINFECTANT

BACTERIA

VIRUSES

FUNGI

Latest generation disinfectant that combines two active ingredients that together exert a broad spectrum disinfectant action with reduced in-use doses: its excellent compatibility with all kinds of materials makes it a versatile product for the complete disinfection of livestock facilities and premises, as well as to disinfect all kinds of livestock transport vehicles, veterinary clinics, (cages, etc) and slaughterhouses (animal stabling area). It is also authorised for use in the food industry.

DOSING:	Routine	0,25%
	Normal	0,5%
	Strict	1-2%

— USE IN LIVESTOCK FACILITIES —

APPLICATIONS:

SANITAS® FORTE VET is a latest generation disinfectant that combines two active ingredients that together exert a broad spectrum disinfectant action with reduced in-use doses: Glutaraldehyde and Didecyl Dimethyl ammonium chloride. The high penetration capacity of these two compounds, together with the action of the surfactants of its excipient, assures an immediate and intense disinfectant action against viruses, bacteria and fungi, even in the presence of organic matter. Its excellent compatibility with all kinds of materials makes it a versatile product for the complete disinfection of industrial warehouses, premises, installations and facilities used for livestock, poultry and rabbit farming, dog kennels and other facilities which house animals. It can also be used to disinfect machinery and equipment, as well as to treat livestock transportation vehicles, veterinary clinics (areas destined for animals, hospitalisation cages, etc.) and slaughterhouses (animal stabling area).

INDICATIONS, RECOMMENDED DOSES AND USE:

SANITAS® FORTE VET can be used to disinfect all kinds of surfaces either by means of rubbing or spraying, being equally effective either way. The product can be used for the ultimate disinfection of installations by nebulisation (aerial disinfection). It can also be used in sanitary areas.

The product will be applied at the recommended dose, leaving it to dry in the area where it was applied, and if this is not possible, leaving it to rest for at least 15 minutes. Utensils can be disinfected by immersion in a solution at the doses indicated on the product, for at least half an hour, and then rinsing with plenty of water, if its size allows so, or it can be disinfected by spraying.

Do not reuse the containers. Dispose of the waste accordingly. Recommended doses: Dilute the product in cold water in the following proportions:

Premises and facilities:

- Routine disinfection: 1:300-1:400 (30-25 ml of SANITAS® FORTE VET in 10 litres of water).
- Normal disinfection: 1:250 (40 ml of SANITAS® FORTE VET in 10 litres of water).
- Strict disinfection: 1:100-1:150 (100-70 ml of SANITAS® FORTE VET in 10 litres of water).
- Aerial disinfection: 1:200 (50 ml of SANITAS® FORTE VET in 10 litres of water).
- Nebulisation and thermonebulisation: 1:3 (one litre of SANITAS® FORTE VET in 3 litres of water, sufficient amount to treat 1000 m3).

Utensils: 1:200 (50 ml of SANITAS® FORTE VET in 10 litres of water). Transport vehicles: 1:200 (50 ml of SANITAS® FORTE VET in 10 litres of water). Sanitary areas: 1:100 (100 ml of SANITAS® FORTE VET in 10 litres of water).

Apply at a rate of:

- 100 ml of dilution per m2 on non-porous surfaces.
- 300 ml of dilution per m2 on porous surfaces.
