

SANITAS[®]

Neozital[®]

OXIDANT DISINFECTANT

Broad spectrum disinfectant to be used in livestock facilities that due to its active ingredient, peracetic acid, provides an excellent disinfectant capacity at very low concentrations. Its formula is extremely powerful and capable of eliminating bacteria, fungi and viruses. It is also completely biodegradable, thus not generating potentially dangerous waste for the environment. Its use doses range from 0.3 to 1%.

DOSING:	Routine	0,3%
	Normal	0,5%
	Strict	1%

— USE IN LIVESTOCK FACILITIES —

APPLICATIONS:

SANITAS® NEOZITAL® is a broad spectrum disinfectant that due to its active ingredient, peracetic acid, provides an excellent disinfectant capacity at very low concentrations. Its formula is extremely powerful and capable of eliminating bacteria, fungi and viruses. It is also completely biodegradable, thus not generating potentially dangerous waste for the environment.

It is a high capacity product to completely disinfect all kinds of livestock, poultry, rabbit farming and kennel facilities as well as other premises used in animal husbandry. It can also be used for the disinfection of utensils, machinery and equipment, in veterinary practices (animal housing areas, cages, etc.) and slaughterhouses (animal stabling areas).

INDICATIONS, RECOMMENDED DOSES AND USE:

SANITAS® NEOZITAL® can be used to disinfect all kinds of installations either by means of rubbing, spraying or nebulisation, being equally effective either way.

The product will be applied at the recommended dose, leaving it to dry in the area where it was applied, and if this is not possible, leaving it to rest for at least 15 minutes. Utensils can be disinfected by immersion in a solution at 0.5% for at least half an hour, and then rinsing with plenty of water, if its size allows it, or it can be disinfected by spraying.

In disinfection by nebulisation, animals must be removed from the premises and can return when the walls have dried off. SANITAS® NEOZITAL® is used diluted in water at concentrations from 0.5% (1 part in 200 of water) to 1% (1 part in 50 of water) according to the amount of dirt present. In areas where the presence of viral pathogens has been confirmed, the product can be used at 1%. For sanitary areas, means of transport and containers it is recommended to apply the product at 0.5%.

In aerial nebulisation the product must be used at doses of 0.5%. As a general rule, the application of 0.1-0.3 litres of diluted product per each square meter is recommended.

TO BE USED ONLY BY SPECIALIZED PERSONNEL.
