PHARMACOLOGICAL

DESCRIPTION:

ZOOVECA® is an anti-mange ectoparasiticide and insecticide, available in a solution that is suitable for use in baths and by spraying. It is suitable for combating the external parasitosis of sheep. Its active ingredient, diazinon, is an external antiparasitic belonging to the organophosphate group, which exerts its action by inhibiting the acetylcholinesterase of the parasite. Diazinon is metabolised through hydrolysis of the phosphoesteric bond, either directly or after oxidation to the corresponding oxidised analogue, diazoxon, which is more toxic but less stable than diazinon. This metabolism is slow in the parasite, so it maintains its selective toxicity, while in mammals toxicity is low, due to their faster metabolism. Diazinon is toxic for birds and cats. This anti-mange ectoparasiticide is effective against: mange, fleas, lice, ticks, sheep keds, flies and their larvae.

MODE OF USE:

This anti-mange ectoparasiticide can be applied topically, in a bath or by spraying.

Bath: suitable for infestations of mites, fly larvae, ticks, lice and *Melophagus ovinus*.

- Prepare the bath with a solution of 16 ml of ZOOVECA® in 10 litres of water (250 mg of diazinon/l of water).
- To make up for lost volume, prepare a solution of 50 ml of ZOOVECA® in 10 litres of water (750 mg of diazinon/l of water).

Spraying: suitable for infestations of fly larvae, ticks, lice and *Melophagus ovinus*.

- Spray with a solution of 40 ml of ZOOVECA® in 10 litres of water (equivalent to 600 mg of diazinon/l of water).

In both cases, the emulsion must first be prepared in a small quantity of water, before shaking and diluting in a larger volume.

REGISTER No.: 0978-ESP

USE BIOCIDES SAFELY. ALWAYS READ THE LABEL AND PRODUCT INFORMATION BEFORE USE.
