DESCRIPTION:

ZYNRAT® BF Fresh Pasta is a ready-to-use pasta-based rodenticide, available in 15 g bags, suitable for controlling the common mouse and the brown or sewer rat in all stages of development. It contains a second-generation anticoagulant active ingredient, brodifacoum, which is effective after a single ingestion.

Thanks to the mode of action of this rodenticide, it causes the death of the rodents without raising suspicions towards the bait among the rest of the members of the colony.

CHARACTERISTICS:

ZYNRAT® BF Fresh Pasta rodenticide has the following innovative and patented characteristics:

- **FLUO-NP® technology:** thanks to a fluorescent pigment technology, the bait can be easily identified, even in low light conditions.
- **PASTA PLUS®** (European patent no. 1 279 334 B1): patented formula that combines a well-balanced blend of food-based components, such as milk flour, sugar and enriched fats, effective against the aforementioned rodents. ZYNRAT® BF Fresh Pasta is a rodenticide that contains a substance with a bitter taste (Denatonium Benzoate). This prevents its accidental ingestion by non-target animals.

USE:

- **Common mouse:** place bait stations with 50 g of product every 5 metres (every 2 metres in areas with high levels of infestation). Check the bait holders every 2/3 days at the beginning, and at least once per week thereafter.
- **Brown rat:** place bait stations with 90 g of product every 10 metres (every 5 metres in areas with high levels of infestation). Check the bait holders every 5/7 days at the beginning, and at least once per week thereafter.

USE BIOCIDES SAFELY. ALWAYS READ THE LABEL AND PRODUCT INFORMATION BEFORE USE.
