DISINFECTANTS

APPLICATIONS:

Sanitas WP Vet is a soluble powder disinfectant for use in the animal farming environment. Authorized for disinfection of all types of surfaces and environments: drinking fountains, floors, walls, ceilings, utensils and containers. Ideal for Incubators, disinfection of eggs and sanitary fords.

It complies with the UNE-EN 13697 bactericide standard for the reference strains: *Escherichia coli*, *Pseudomonas aeruginosa*, *Enterococcus hirae* and *Staphylococcus aureus*.

It complies with the UNE-EN 13697 fungicide standard for the reference strains: *Candida albicans* and *Aspergillus niger*.

HOW TO USE:

Sanitas WP Vet is applied by spraying, soaking, immersion, brushing, nebulization and thermonebulisation of the diluted product. The aerial disinfection of premises should be carried out by specialized personnel. Do not apply treatment in the presence of animals. It includes a color indicator that informs about the duration of the disinfectant effect of the product. As time passes, the intensity of the color starts degrading, until practically disappearing, so it is the time to renew the solution in case of use in sanitary fords. This effect will depend on the presence of organic matter, that is, the higher the presence of organic matter, the higher the rate of degradation.

DOSES OF USE:

Dissolve 5 grams of product per liter of water (0.5%) to make a routine disinfection. In case of high contamination you can reach up to 1 %, 10 grams per liter of water. Apply between 200-300 ml of the solution / m² of surface.

In the case of aerial disinfection: Dilute 40 grams of product per liter of water (4 %). Apply 5 L of the solution per 1000 m³.

USE BIOCIDES SAFELY. ALWAYS READ THE LABEL AND PRODUCT INFORMATION BEFORE USE.
